JCI NAVIGATOR EVALUATE

Provision of Care: Admission to Hospital

Is there a process to admit patients who require inpatient care to the hospital?

No

Yes

https://jci.iad1.qualtrics.com/jfe/form/SV_aXVLpi0zsVE7ZpH

JCI NAVIGATOR EVALUATE

Prevention and Control of Infections: Hand Hygiene

In which areas of the hospital is hand hygiene monitored for compliance?

Monitored in some clinical and support areas

Monitored throughout the entire hospital

None of the above

Opportunities for Improvement

Recommendation

- Process: Hospital needs to have a written process on isolation of patients with known/suspected infectious diseases.

Next Steps

- Insight: Do we have written policy/procedure(s) in writing for isolating patients with potentially contagious/communicable diseases?

Recommendation

- Room/Equipment/Resources: Identify designated area(s) to isolate infectious patients. Appropriate PPE provided to staff.

Next Steps

- Insight: Do we have adequate PPE for staff caring for patients in isolation? Have we identified high risk procedures that require negative air pressure environments?

Recommendation

- Isolation Training: Hospital needs to have staff trained on cohorting methods and techniques.

Next Steps

- Insight: How do we train our staff on identifying and managing cohorts of patients with contagious and communicable diseases?
